

## Display Case and Shelf Lighting kits

Showcase Express has just released their **museum quality lighting system** that was custom designed for use with all Showcase Express displays. At only 1/10" tall and 1/2' wide, this lighting system can also be use with any existing display or shelving.

Available for all size displays, these super white LED light bars shine at a 120 degree angle with a life up to **100,000 hours**. The stock length is 12-inches and connect end to end to fit perfectly in all standard length cases.

And if you have a custom length display case, they can still be used – our custom design allows for expansion, just like our display system, to any length you desire at 6 inch increments. One **12 volt** transformer can power up to a total of **140 feet light bars**.

Our custom engineered wiring system connects each shelf light with the next. The wiring system can be easily hidden behind the display case - reducing the wiring mess, normally associated with other products. See Website for lengths and pricing.
